Release Note for TU13

NemID for Citizen and Business

Contents

1	OOAPI 1.161	4
2	TU example	5
3	SignViewer	6

Version

22 May 2013	Version 1.0	BMATZ
28 June 2013	Version 1.1	BMATZ

1 OOAPI 1.161

The OOAPI 1.161 includes the following fixes and additions

- ooapi.net UTC Time check on CRL's take Daylight Savings changes into account
- ooapi.net caching of revocation lists are optimized to minimize locking
- ooapi.net caching performance improvements
- ooapi.net harder check of CA certificates during revoking check
- Managing certificates with missing Issuing CA URL (AIA extension).
 - Issuing CA URL will be added to new POCES2 certificates issued after mid-2013.

2 TU example

The TU example, TU13 contains a number of fixes and additions:

- RID OIO webservice implementation example
- Login/signing with hardware
- PDF signing with attachments
- New URL's to load the applets
- Encryption of the configuration
- Handling the new error code on OTP entry timeout (AUTH012).
- Bug fixes in PDF Signing

3 SignViewer

The former tool, "PDF validator", has been replaced by the new tool called "Sign Viewer". Sign Viewer can be used to ensure that PDF files will be validated correctly in both the OpenSign applet as well as in the OTP applet. The new tool addresses a bug where specific PDF files could pass the validation, but could still not pass the validation in the OTP applet.

Sign Viewer can, like the previous PDF validator, also be used for automated validation of PDF files.
